

LightSensor_Web::reportToJSON

LightSensor_Web::website
Event_Refresh

LightSensor::getDarkText

```
graph LR; A[LightSensor_Web::reportToJSON] --> C[LightSensor::getDarkText]; B[LightSensor_Web::website Event_Refresh] --> C;
```

The diagram illustrates two calls to the `LightSensor::getDarkText` method. On the left, two boxes represent the calling methods: `LightSensor_Web::reportToJSON` (top) and `LightSensor_Web::website Event_Refresh` (bottom). Arrows from these boxes point to a single box on the right labeled `LightSensor::getDarkText`, which is shaded gray. This indicates that both methods invoke the `getDarkText` function of the `LightSensor` class.
